

## Emerald City Engineering

Thanks for purchasing your new ECE guitar stand. The following assembly instructions should have you up and running in just a few minutes. It is recommended that the stand be assembled on a table or workbench, however, the stand can be assembled on the floor as well. You will need a #3 square drive (recommended) or #3 phillips head screwdriver, and/or cordless drill for assembly. If using a cordless drill, make sure to set the torque setting to avoid over-driving the screws.

### Your new stand comes with the following parts...

- a) 2 end panels (one right, one left)
- b) 1 PCT T-Rail
- c) 2 bottom rails
- d) 3-5 Neck grips (quantity varies)
- e) 10 Confirmat screws (8 required)

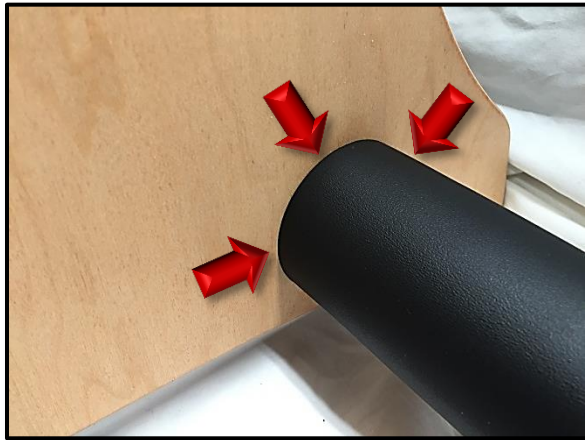

Step 1. Slide the neck grips into the top rail.

Step 2. Insert T-rail into both legs (lay stand horizontally). Fasten T-rail (2 each side).

Step 3. Fit rear bottom rails into recessed pockets. Tuck fabric into pocket while fastening.

Step 4. Repeat step 3 at remaining locations. Stand is complete and ready for use.

Step 5. Neck grip in "open position." Pull grip open prior to placing guitar neck into grip.

Step 6. Rest weight of guitar on base rails. Press neck gently into neck grips. Grip will 'grab' the neck.
